<u>REMARKS</u>

[0003] Applicant respectfully requests reconsideration and allowance of all of the

claims of the application. Claims 1-3, 5-26, 34-38, 40-42, and 45-46 are presently

pending. Claims 1, 7-10, 13, 26, 34, 35, 37, 38, 40, and 45 are amended herein. Claims 4

and 39 are cancelled without prejudice or disclaimer.

Statement of Substance of Phone Interview

[0004] Examiner Stevens graciously talked with me—the undersigned

representative for the Applicant—on October 31, 2008. Applicant greatly appreciates the

Examiner's willingness to talk. Such willingness is invaluable to both of us in our

common goal of an expedited prosecution of this patent application.

[0005] During the interview, we discussed how the claims differed from the cited

reference, namely Parry. Without conceding the propriety of the rejections and in the

interest of expediting prosecution, we also proposed several possible clarifying

amendments.

[0006] Examiner Stevens indicated that he believed although reference Parry does

not explicitly teach all the features embodied in some independent and dependent claims,

such features were inherent in Parry. We disagreed with Examiner Stevens.

Nevertheless, we proposed amendments further highlighting distinctions from the

reference. Examiner Stevens indicated such amendments helped to distinguish over

reference Parry, and requested the amendments be presented in writing for further

consideration.

AND SOLD THE SUBJECT OF THE SUBJECT

[0007] Applicant herein amends the claims in the manner discussed during the

interview. Accordingly, Applicant submits that the pending claims are allowable over the

cited art of record for at least the reasons discussed during the interview.

Formal Request for an Interview

[0008] If the Examiner's reply to this communication is anything other than

allowance of all pending claims, then I formally request an interview with the Examiner.

I encourage the Examiner to call me—the undersigned representative for the Applicant—

so that we can talk about this matter so as to resolve any outstanding issues quickly and

efficiently over the phone.

[0009] Please contact me to schedule a date and time for a telephone interview that

is most convenient for both of us. While email works great for me, I welcome your call

as well. My contact information may be found on the last page of this response.

Claim Amendments

[0010] Without conceding the propriety of the rejections herein and in the interest of

expediting prosecution, Applicant amends claims 1, 7-10, 13, 26, 34, 35, 37, 38, 40, and

45 herein. Claims 4 and 39 are cancelled without prejudice or disclaimer. Applicant

amends claims to clarify claimed features. Such amendments are fully supported by the

Application, and are made to expedite prosecution and more quickly identify allowable

subject matter. Such amendments are merely intended to clarify the claimed features, and

should not be construed as further limiting the claimed invention in response to the cited

reference.

Substantive Matters

Claim Rejections under § 102(e)

[0011] Claims 1-26, 34-42, 45 and 46 are rejected under 35 U.S.C. § 102(e) for

being anticipated by U.S. Patent No. 6,845,508 to Parry ("Parry"). Applicant respectfully

traverses the rejections because, for each rejected claim, no single reference discloses

each and every element of that rejected claim. Furthermore, the elements disclosed in

the single reference are not arranged in the manner recited by each rejected claim.² In

light of the amendments presented herein and the discussion during the above-discussed

Examiner interview, Applicant submits that these rejections are moot. Accordingly,

Applicant asks the Examiner to withdraw these rejections.

[0012] In rejecting various claims including claim 1, the Office took the position

that Parry discloses "intercepting non-native (example of a 32 bit driver that is design to

provide common architecture to Windows i.e., Column 4, lines 38-52) program modules,

the non-native (example of a 32 bit driver that is designed to provide common

architecture to Windows i.e., column 4, lines 38-52; suggestion of a 64 bit bus, column 4,

lines 17-21) kernel (column 4, lines 8-12) calls calling a native kernel having access to

hardware through one or more device drivers and hardware interfaces native to the native

kernel; converting the intercepted non-native (example of a 32 bit driver that is design to

provide common architecture to Windows i.e., column 4, lines 38-52) kernel calls into

or inherently described, in a single prior art reference." Verdegaal Bros. v. Union Oil Co. of California, 814 F.2d 628, 631, 2 USPQ2d 1051, 1053 (Fed. Cir. 1987); "The identical invention must be shown in as complete detail as is contained in the ... claim." *Richardson v. Suzuki Motor Co.*, 868 F.2d 1226, 1236, 9 USPQ2d 1913, 1920 (Fed. Cir. 1980). The sea AMER \$2121.

¹ "A claim is anticipated only if each and every element as set forth in the claim is found, either expressly

1989); also see MPEP §2131.

² See *In re Bond*, 910 F.2d 831, 15 USPQ2d 1566 (Fed. Cir. 1990).

GCC TO Susiness of IP 10

native kernel calls; and delivering the converted native kernel calls to the native kernel without..." (Office Action 07/02/2008 at pp.4-5).

[0013] Applicant respectfully traverses the rejections for at least the following reasons.

PCI data bus that supports 32 bit or 64 bit transfer rate has nothing to do with native or non-native kernel calls

[0014] 32-bit and 64-bit and native/non-native code or native/non-native call are two independent and unrelated technical terms. The term "PCI", as defined in Parry, refers to "Peripheral Component Interconnect," a high-performance 32 bit or 64 bit bus designed to be used with devices that have high bandwidth requirements such as the display subsystem. (Parry at col.4, lines 17-21). The term "native code," however, refers to program code that is written to run on a specific processor using that processor's instruction set. (Webopedia, at http://webopedia.com/TERM/N/native code.html). "Native code," also referred to as "machine code", may be regarded as a primitive programming language or as the lowest-level representation of a compiled or assembled computer program. Programs in interpreted languages (like BASIC, Matlab, etc) or compiled languages (such as C, C++, PASCAL, JAVA, etc) are not "native" programs. These programs must be interpreted or compiled into "native code" for a specific type of CPU. As technology advances nowadays, some compiled languages start taking advantage of 64-bit bus and supporting 64-bit compilation. However, merely supporting 64-bit compilation, or taking advantage of 64-bit bus, does not necessarily turn those programs into "native code." Today's compiled programming language still requires a compiler to compile, or translate, those applications written in compiled language codes

Serial No.: 09/847,535 Atty Docket No.: MS1 -0665US Atty/Agent: Ningning Xu

ECONOC The Business of 17 is

(like C, C++, Java, etc) into "native code" for execution at a specific operating system,

even though the compiled programming language supports 64-bit.

[0015] In other words, the 32-bit and 64-bit and native/non-native code or

native/non-native call are two independent and unrelated technical terms. Applicant

respectfully traverses the rejection in the Office Action to relate 32-bit or 64-bit support

to native or non-native calls.

Kernel Mode or Drivers in Parry are focused at hardware level, not at software level as

<u>claimed</u>

[0016] "Kernel mode," as defined in Parry, refers to the processor mode which

allows full, unprotected access to the system. A driver or thread running in kernel mode

has access to system memory and hardware. (Parry, col. 4, lines 8-11). "Driver" is the

kernel mode used to either control a hardware device or to emulate a hardware device.

(Parry, col. 3, lines 54-56). The term "WDM" in Parry is also focused on hardware.

WDM, or Windows 32 Driver Model, is a 32 bit driver model based on the Windows NT

driver model that is designed to provide a common architecture of I/O services and

binary-compatible device drivers for both Windows NT and Windows operating systems

for specific classes of drivers. (Parry, col. 4, lines 38-44).

[0017] Independent claim 1, as amended, recites (in part with emphasis added):

intercepting non-native kernel calls from non-native program modules, the

non-native kernel calls calling a native kernel of a native operating

system, the non-native kernel calls comprising non-native instructions

not operable on the native operating system, the native kernel being part

Serial No.: 09/847,535 Atty Docket No.: MS1 -0665US

Atty/Agent: Ningning Xu

-20-

of the native operating system and having access to hardware through one

or more device drivers and hardware interfaces native to the native kernel;

converting...

delivering the converted native kernel calls to the native kernel for direct

execution at the native kernel of the operating system without

[0018] In view of the above emphasized features, Applicant respectfully submits

that the method for implementing a kernel emulator is more focused on software level

than Parry. For example, the "native kernel" is part of a native operating system, which,

according to Fig. 3 and associated text, is on top of a hardware level. Unlike Parry,

which discloses a kernel mode where a driver or a thread has access to system memory

and hardware, the emulator recited in claim 1 "[delivers] the converted native kernel calls

to the native kernel for direct execution at the native kernel of the operating system..."

Many other features as claimed are not disclosed in Parry

[0019] Claim 1, as amended, recites (in part with emphasis added):

converting the intercepted non-native kernel calls into native kernel calls,

the native kernel calls comprising native instructions operable on the native

operating system and calling the native kernel of the native operating

system, the converting comprising translating addresses from non-native

length within the non-native kernel calls into native length in the native

kernel calls...

[0020] Applicant respectfully submits that at least the step of "converting" is not

disclosed or enabled in Parry.

Serial No.: 09/847,535 Atty Docket No.: MS1 -0665US

Atty/Agent: Ningning Xu

The Susiness of 17 18

[0021] In rejecting claim 1, the Office held the position that Parry teaches, *inter alia*, "converting the intercepted non-native (example of a 32 bit driver that is design to provide common architecture to Windows i.e., column 4, lines 38-52) kernel calls into

native kernel calls..." (Office Action 07/02/2008 at p.4).

[0022] The WDM, or the Windows 32 Driver Model in Parry, which is designed to provide a common architecture of I/O services and binary-compatible device drivers, is

not per se designed to perform a conversion.

[0023] Without conceding the propriety of the rejections with respect to "converting" being performed in WDM, Applicant further submits that amended feature, "the converting comprising translating addresses from non-native length within the non-native kernel calls into paties length in the native length in the native length."

into native length in the native kernel calls," is not disclosed in Parry.

[0024] During the interview, Examiner Stevens indicated that these features, although not explicitly disclosed in Parry, are inherent in Parry. Applicant respectfully disagrees. In order for a feature to be "inherent" the feature must *necessarily* exist in the reference; the claim as a whole must be enabled by the reference.

[0025] Parry teaches drivers in kernel mode to control a hardware device or to emulate a hardware device. Parry further provides WDM to provide a common architecture

of I/O services and binary-compatible device drivers. This is not what is claimed.

[0026] In particular, amended claim 1 recites "intercepting non-native kernel calls from non-native program modules... the native kernel being part of the native operating system... converting the intercepted non-native kernel calls into native kernel calls... delivering the converted native kernel calls to the native kernel for direct execution at the

Serial No.: 09/847,535 Atty Docket No.: MS1 -0665US Atty/Agent: Ningning Xu

native kernel of the operating system." Even if the WDM in Parry may involve a data conversion as Examiner Stevens suggested, such conversion is not *necessarily* performed in

the same way as claimed.

[0027] A person having ordinary skill in the art ("PHOSITA") at the time of the

instant invention, after reading Parry, would not know whether a conversion is performed in

WDM in Parry, and even if it is, as suggested by Examiner Stevens, how such conversion

would be conducted in WDM. For example, the act of converting comprising "translating

address from non-native length within the non-native kernel calls into native length in the

native kernel calls" is not disclosed in Parry.

[0028] Other features related to the act of "converting" in dependent claims are not

disclosed or enabled in Parry. For example:

• "the converting further comprises translating a non-native paradigm for passing

parameters into a native paradigm for passing parameters" as recited in claim 2;

• "the converting further comprises translating non-native CPU instructions into

native CPU instructions" as recited in claim 3;

• "the converting further comprises converting non-native argument format into

native argument format" as recited in claim 5;

• "the converting further comprises translating words from non-native word size

into native word size" as recited in claim 6;

are not explicitly disclosed or enabled in Parry.

[0029] Furthermore, claimed features in claims 7-10, i.e.,:

Serial No.: 09/847,535 Atty Docket No.: MS1 -0665US Atty/Agent: Ningning Xu ECONOCCIONO SOCIONO DE SE

-23-

• "limiting addressable memory to a range addressable by non-native program

modules",

• "managing memory space that is accessible to both native and non-native program

modules",

• "synchronizing a native shared data structure with a non-native shared data

structure",

• "managing memory space accessible to both native and non-native program

modules; and mapping versions of process shared data structures (process SDSs)

and versions of thread shared data structures (thread SDSs) between native and the

non-native program modules",

are all absent in Parry.

[0030] Therefore, independent claim 1, as amended, is respectfully asserted

patentably distinct from Parry. Additionally, dependent claims 2, 3, 5-10 are patentably

distinct from Parry for additional and independent reasons mentioned above.

[0031] Independent claims 13, 26, 34, 38, 40 and 45 are amended to incorporate

features similar to claim 1, and therefore are also asserted patentably distinct from Parry for

similar reasons as claim 1, discussed above.

[0032] For example, regarding claims 13 and 34, it is *not necessarily the case* that

Parry performs each of the claimed acts of the methods in the same way claimed, in part

because Parry does not *necessarily* perform the acts as recited in these claims at all. Thus

Applicant submits that the disclosure of Parry fails to anticipate these claims at least

because it does not disclose each and every act as set forth in the claims, either expressly

Serial No.: 09/847,535 Atty Docket No.: MS1 -0665US

Atty/Agent: Ningning Xu

ACONOMISSON The Susiness of 15 to accommod to the second s

or inherently, as recited in claims 13 and 34. Accordingly, Applicant respectfully requests

that the rejection of these claims be withdrawn and the claims allowed.

Dependent Claims 11, 12, 14-25, 35-37, 41, 42, and 46

[0033] These claims ultimately depend upon independent claims 1, 13, 26, 34, 40

and 45. As discussed above, claims 1, 13, 26, 34, 40 and 45 are allowable. It is

axiomatic that any dependent claim which depends from an allowable base claim is also

allowable. Additionally, some or all of these claims may also be allowable for additional

independent reasons.

Serial No.: 09/847,535 Atty Docket No.: MS1 -0665US Atty/Agent: Ningning Xu

Conclusion

All pending claims are in condition for allowance. Applicant respectfully [0034]

requests reconsideration and prompt issuance of the application. If any issues remain that

prevent issuance of this application, the **Examiner is urged to contact me before**

issuing a subsequent Action. Please call or email me at your convenience.

Respectfully Submitted,

Lee & Hayes, PLLC
